CLAIMS

5

- 1. Method for logging information during a call completion process in an Internet call waiting environment comprising the steps of:
 - creating a service detail record (200),
- and assigning a value to a parameter of the service detail record (200).
 - 2. Method according to claim 1, whereby the value of said parameter of the service record (200) is based on call related information.
- Method according to claim 2, whereby said call related information is an Anumber (202), a B-number (203), an A-number presentation (204), or an originally dialed number (205).
- 4. Method according to claim 1, whereby the value of said parameter of the service record (200) is based on information relating to the call completion process.
 - 5. Method according to claim 4, whereby said call completion related information is start of pop-up (206), start of outgoing call (207), status (208), choice (209), pop-up choice time (210) or time out (211).

25

- 6. Method according to all of the preceding claims, whereby the service detail record (200) is created at the beginning of the call completion process.
- 7. Method according to claim 4, 5, or 6, whereby a timer is started, and the value of said timer is logged in the service detail record (200) on a point of time during the call completion process.
 - 8. Device for logging information during a call completion process in an Internet call waiting environment comprising means for:

35

- creating a service detail record (200),
- assigning a value to a parameter of the service detail record (200).

WO 2005/055575 PCT/EP2004/012955

9. Device for accessing via a network a device for logging information during a call completion process in an Internet call waiting environment.

10

10. Device according claim 9, whereby said network is a mobile network.

5

11. Device according claim 9, whereby said network is a fixed network.
